LightCutter 2.0 Motorized - the new generation of efficient cutting heads

Whether for flatbed or bevel cutting systems: The cutting head LightCutter 2.0 is the perfect solution for efficient and cost-effective laser cutting. The new generation of our Light Cutter family is designed for cutting applications in the medium power range up to 4 kW and is characterized by a high cutting quality for all metals - especially mild steel, stainless steel and aluminum.

Due to an automated motor-driven adjustment of the axial focus position, the cutting head works precise and stable at all times, even at accelerations of up to 3 g. The display of the set focus position on the front of the cutting head makes commissioning much easier. The LightCutter 2.0 Motorized covers a large Focus position range of 23 mm.

Configuration examples:

Benefits

- » excellent value for money
- » very high cutting speed and optimal edge quality
- » motorized focus adjustment
- » different fiber plugs (QBH, D)
- » display of the focus position on the front side of the cutting head
- » focal position up to 23 mm
