

Evacuatable Moisture Analyzers

The MIDAC V-Series is designed to detect lower moisture levels than ever before...so you can raise your standards for purity higher than ever before! It's true, MIDAC's V-Series Moisture Analyzers provide unprecedented capability for detecting moisture and other impurities in corrosive gases. V-Series systems are the only complete, turnkey systems to give you all these features and capabilities:

Features:

- Detection to less than 10ppb of H₂O in many corrosive matrices, including Ammonia
- Detection to 1.0 ppb in HCl
- Complete immunity to the effects of atmospheric background moisture
- Extremely fast response and equilibration times
- The ability to analyze multiple compounds in addition to moisture
- Customized low volume electro-polished sample cells
- Low internal power dissipation for durability under extended vacuum
- Short set-up time and easy transportability
- Customized dedicated analytical and process software
- Superior corrosion-resistant materials for extended service life

Applications:

- Semiconductor manufacturing
- Specialty gas suppliers
