

FAC 光纤柱面镀膜

The Fast Axis Collimated by an AR Coated Fiber

产品描述: Product Overview

柱面透镜，也叫 FAC 快轴准直透镜，一般采用直径 63um 或 200/220um 光纤进行侧面镀膜，对激光快轴发散角进行准直，提高光功率耦合效率。FAC 快轴准直透镜镀膜难度大，一般需要把多根一定长度的玻璃/光纤平行固定在夹具上，然后装载到镀膜机，进行正反面两次镀膜。镀膜以后再将单根玻璃光纤分割成小段以供单个产品使用。

The fast axis collimator is a simple cylindrical lens, which was generally applied in optical fiber coupling laser. The optical power coupling efficiency was improved by the beam collimation at fast axis divergence angle.

Photonstream developed a fiber level FAC with 2-sides anti-reflective thin film coated. This is an innovated solution for compact high power laser package product. The Ø63um or 200/220um fiber are fixed parallel to the fixture and coating 2-sides. Customer then divides the long lens into small sections according to application.

应用领域 Product Application

-光纤激光器耦合 Fiber laser diode coupling

-无人驾驶汽车光纤传感 Fiber optic sensing

产品特点 Product Feature

High cleanliness and visual inspection for each unit

Precision AR coated on 2-sides

High laser damage threshold

High optical power coupling efficiency

Accept custom design diameter(63um typically)

主要参数 parameter

光纤规格 Fiber Type	Ø63um 高纯度无包层玻璃棒；Ø63um High purity non-clad glass rod MM-S200/220-22A 光纤；或客户指定 MM-S200/220-22A fiber,Customer Customize
透镜数量 Quantity	25-27 根/夹 25-27 pieces/set
透镜有效长度 Effective Length	60.5mm/根,客户可按需求裁成 7-8mm 小节使用 60.5mm/piece,Customers cut it into 7-8mm as required
