Fizeau Interferometer IFV-60

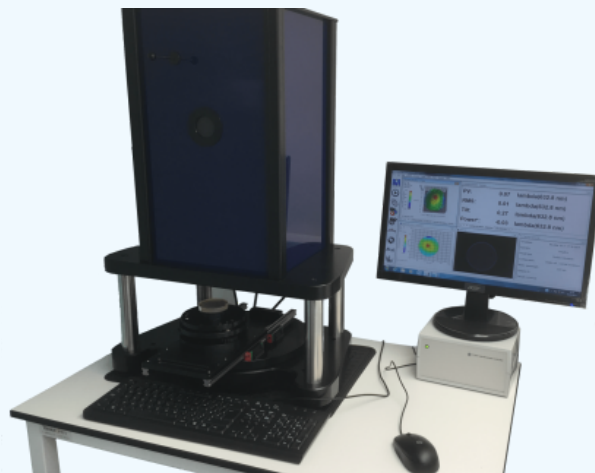

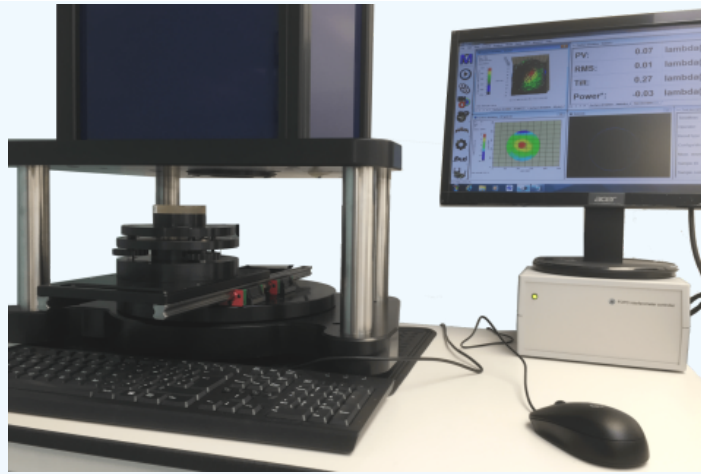

Armstrong Optical Fizeau interferometers IFV-60

Newly available from Armstrong Optical is a customer-proven phase-measuring Fizeau interferometer with 60mm aperture in a vertical (downward-looking) configuration, IFV-60. The aperture can also be increased to 100 if required.

It is supplied with a certified $\lambda/20$ transmission flat and an ergonomically designed sample handling system.

Using the well-respected, powerful and intuitive μ Shape Professional control, acquisition and analysis software from our partners Trioptics Berlin enables the simple, precise measurement of larger flat surfaces and windows in transmission.
