

THE EIDOLON

# HAND HELD SLIT LAMP

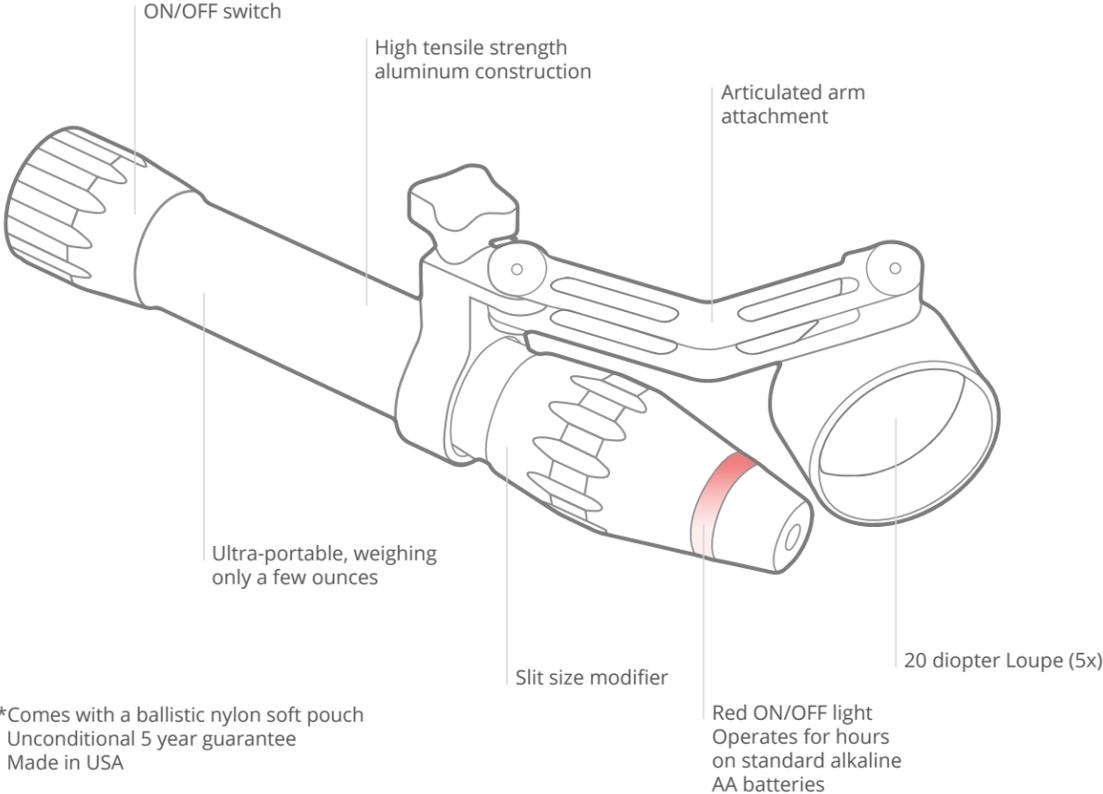

MODEL 510L

**EIDOLON**  
OPTICAL

# What is the Hand Held Slit Lamp 510L?

The ultra-portable Eidolon Hand Held Slit Lamp Model 510L is a popular diagnostic instrument for examination of anterior segment structures and ocular abnormalities. Its patented optical system produces a high-brightness, continuously adjustable slit image.

\*Comes with a ballistic nylon soft pouch  
Unconditional 5 year guarantee  
Made in USA

US Patent Number 5,638,150

### DIVERSE APPLICATION

The 510L is convenient for pediatric and geriatric settings, emergency departments, screenings, ward rounds, bedside examinations, post-op evaluations and mission work.

### SIMPLE CONTROL

Examine the lens of the eye by advancing the focused slit beam across the lens. Focus the beam by bringing the instrument closer to the eye.

# Cobalt Blue Filter

### FLUORESCEIN EXAMINATION

Use our Cobalt Blue Filter to discern corneal abrasions and epithelial defects with fluorescein dye.

# iPhone Adapter

for iPhone 5/5S, SE, 6/6S, 6+/6s+, 7, 7+, 8, 8+, 10, and iPad Mini

### RECORD & SAVE

The HHSL adapter links your 510L to your iPhone and turns the instrument into a recording device. Save and upload images to the cloud.

### DETAILED IMAGES & VIDEOS

You can take HD horizontal or vertical images and videos of your patients' eyes.

### EASY TO ASSEMBLE

The HHSL adapter connects effortlessly to the Eidolon iPhone cover. Simply hook up the adapter to the 510L's loupe; then slip your Eidolon iPhone cover to the HHSL adapter.
