Camera with Affordable Price

John Grant on Feb 25, 2019

Good price for an IR cam. The app was more difficult than usual to get installed. Plugging the camera into my phone using an adapter, started the app quickly. No camera detected, then a white box, Select USB Web Camera. Just repeatedly press the red OK. Can take up to 10 presses, then works just great for seeing the relative temperatures on being electronic circuit board. Always wanted that capability, finally got it thanks to affordable Perfect Prime price.
