

## Ensure manufacturing outcomes meet product design requirements.

### Manufacturing Solutions:

- Automate tests that have been set up in key Imatest Master modules.
- Enables integration of Imatest tests as software components which can be run on automated test equipment.
- Safely balance fast manufacturing and product quality by automating a process that has been done in the past by human quality control.
- Eliminate potentially self-serving results generated by a partner’s in-house testing system.
- Remove the need for correlation of partner test results by using the same Imatest algorithm and charts throughout all departments.
- Includes parallel processing capability.

### Recent Enhancements:

- Support for [multitest](#)
- [Parallel processing](#)
- Support for all Imatest Master [acquisition hardware](#)

### Selected Features:

- **Operator Console:** Customizable user interface for factory testing and real-time [IT.NET acquisition library](#)
- [IT.NET asynchronous methods](#) focusing
  - **Pass/Fail Spec:** Define the required quality levels for a camera.
  - **SFRplus Chart Analysis:** Complete map of sharpness non-uniformity.
