Industrial Fibre Assemblies

Ultra-Ruggedised Fibre Assemblies utilising buffered fibres, water blocking aramid fibre strength members and rugged jacket material.

Fibre solutions offer many mechanical and electrical benefits when compared to copper cable solutions. Moving to fibre solutions easily dramatically increases cable lengths, typically making concerns about bandwidth redundant!

Additionally, the reduced OD of fibre allows tighter bending radii and "Extreme" Flex Life Rating, as well as perfect EMI performance in any application.

Roll over to see Product Attributes and Benefits.

-
- Extended Length
 - High Flex Extreme
 - High Flex Moderate
 - Reduced OD
 - Smaller Plug Size
