Komodo II™ Fiber Frame Grabber

Innovative Approach

Komodo II Fiber is high-performance yet low-cost FPGA card supporting four SFP+ 10GigE transceivers optical interface. The card is based on powerful FPGA, a DDR4 memory system with 4GB onboard video cache and 55 Gbps throughput. A high speed 8 lane Gen 3.0 PCI express interface allows fast data transfers between optical links and computer memory while a versatile GPIO with multi-standard support enables connection to external devices. The SFP+ interfaces are connected directly to FPGA device transceiver channels to minimize latency.

Intelligent Design

All of these features combine make the Komodo II Fiber ideal for a wide range of applications, including network processing and security, compute and storage, instrumentation, broadcast, defense and aerospace.
