LOGAN OPTICAL DESIGNS

used for both astronomy and terrestrial sighting. This image shows it using a simple Thorlabs CMOS \$350 camera, but any camera can be used. The cost of this variable focus 3" telescope is \$1,150 or \$1,600 with camera. See some sample images below. Ability to take great moon pictures and alignment within 5 minutes. Jupiter and Saturn images for this simple 3" diameter and 12" long telescope are impressive; a great scope to get the kids hooked on astronomy. The American flags were imaged 0.25 miles away; 0.25" resolution at 0.25 miles range on a cloudy day!
