

Laser Systems & Applications

MILLENNIUM LASERS - providing cost-effective UK made laser cutting & engraving systems. The VULCAN range.

Millennium Lasers has a wealth of experience in the field of laser material processing such as cutting, engraving, welding, marking and drilling a multitude of materials.

Building on core skills and knowledge developed over 30 years in the industry our range of laser cutting and engraving machines encompassing Fibre and CO2 lasers provides the end-user with a UK made product that is designed, developed and supported at our base in S. Wales, UK.

At the heart of the cutting & engraving systems lies an ML-series laser tube with high power, long life, reliability and stability ensuring that the cost of ownership of the machines is low and performance is at its highest.

Please refer to the Cutting & Engraving Material Guide for more information on the VULCAN systems capabilities.
