

## Sapphire components of irregular shape

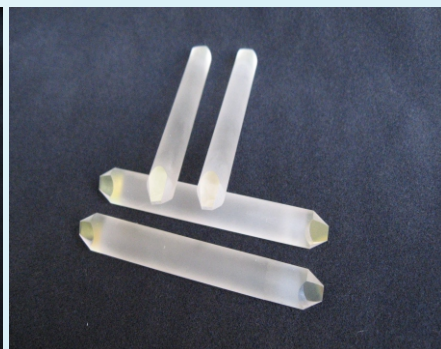

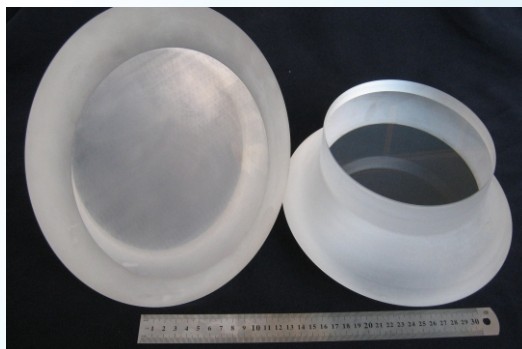

ARD-Optics manufactures optical polished items of complicated configuration from sapphire, quartz glass and other optical materials, in case of requirement with a high degree of flatness.

ARD-Optics manufactures products at the customer's individual requests (commercial sapphire optics and quartz glass optics).

Optical products of irregular or non –typical shapes can be divided into the following types:

- \*Cones & truncated cones
- \*Pyramids & truncated pyramids
- \*Stepped windows
- \*Cylinders-rods & tubes
- \*Prisms
- \*Wedges
- \*Axicones

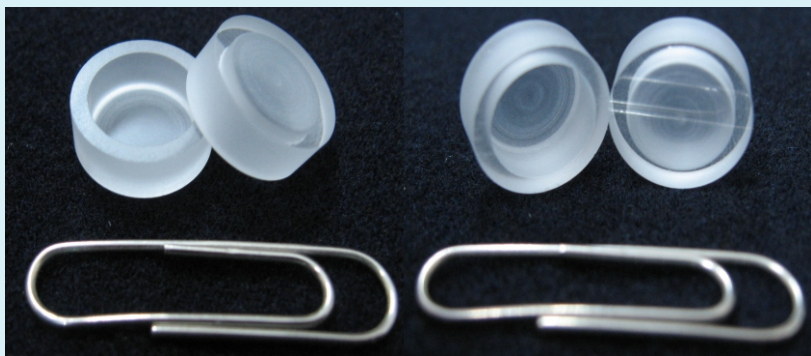

ARD-Optics manufactures stepped windows of different shapes, from simple round to complicated configuration at the customer's request (round, oval, rectangular and mixed).

And also manufactures sapphire windows with a side step polishing and the windows with an internal polished bore. Windows can also be made from other optical materials, at the request of the customer with a high degree of plane-parallel.

Ard Optics offer high pressure sensors made from sapphire. We have developed technology for such sensors.

The sensors can be manufactured at the request of the customer.
