Laser Sheet Cutting

Sheet Cutting Laser Services

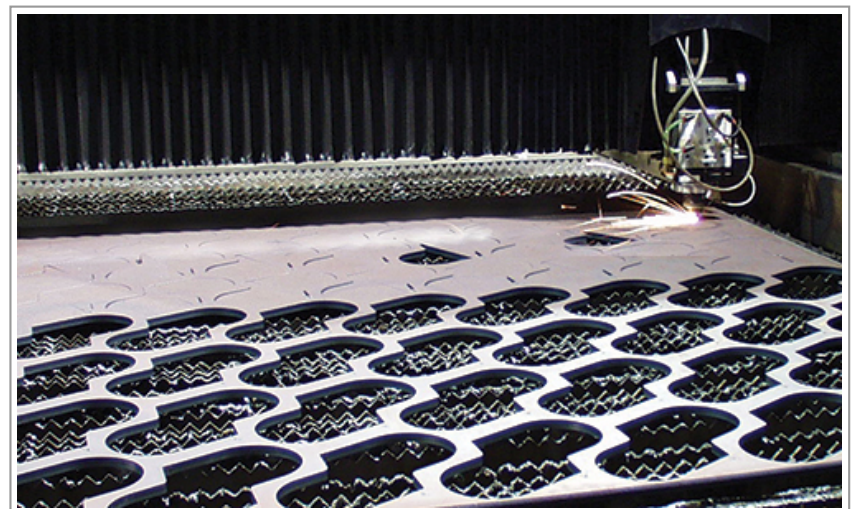

Our CO2 and fiber laser cutting systems offer rapid cutting speeds, excellent cut edge quality, minimal tapered kerf, and tight tolerances (held to $\pm .005$ " depending on material and thickness), enabling them to perform tasks that would be difficult using conventional machinery.

Sheet sizes up to 6' x 11'.

Typical cutting thickness up to:

- 3/4" on carbon steel
- 3/8" on stainless steel
- 3/8" on aluminum

Our new 9,000 watt fiber laser system utilizes the latest advances in laser

manufacturing technology, offering exceptional cut edge quality and high cutting speeds.

It is integrated with an automated sheet loading tower system, which allows for faster turnaround on large production runs.
