

System Design and Manufacture

Since our beginning in 1983, Spectral Systems have provided design and manufacturing support for complete infrared systems. In fact, our first shipment was an infrared microscope system for FT-IR spectroscopy. The benefit of working with us for system design and manufacturing includes access to our FT-IR product and infrared optical system knowledge. This knowledge can result in reducing your time to market through use of our systems diagnostic experience and other benefits realized from our state-of-the-art facilities. Our two sites in Hopewell Junction, NY and Milford, CT provide over 20,000 square feet equipped, maintained and optimized for polishing, coating and aligning infrared optical components and systems. Please call us to discuss how we can help with your infrared design and manufacturing needs.

GET IN TOUCH

We're here to help - please let us know how we can do so.
