Thunder Series

Ultimate Power for Your Practice

DISCOVER MORE WITH CARTESSA

The device at a glance

Thunder Series is composed by several models powered by wavelengths considered gold standard in dermatology and aesthetic medicine. These lasers can be equipped with Alexandrite 755 nm and/or Nd:YAG 1064 nm. This is the most powerful laser series able to combine maximum patient comfort and treatment efficacy with the greatest performances and speed.

Raising the bar in permanent hair reduction

Thunder Series allows the operators to perform permanent hair reduction treatments all the year long on all skin types because of the two gold-standard wavelengths available.

Its highest laser power guarantees high energy levels with big spots for fast procedures and wide treatment areas.

The combination of high laser power with an optimized spots shape permits a very efficient energy distribution for unparalleled uniformity and safety of treatment.

Thunder Quanta Scanner

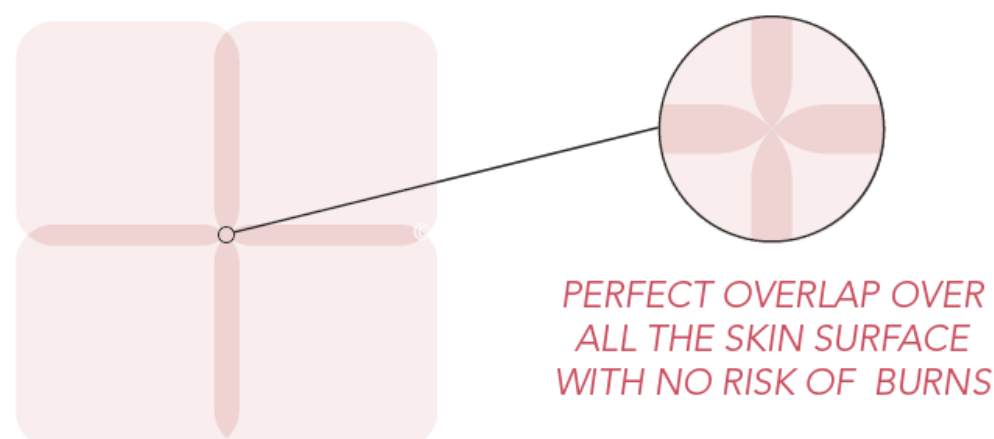

The new Scanner automatically delivers laser energy homogeneously on really wide areas for controlled pulse overlapping in extremely reduced treatment times.

The less the treatment time, the more the patients to be treated. Its exclusive AutoMotion Technology can perform hair removal procedures with the maximum comfort on every kind of skin.

Super Elliptical Shape

The Super Elliptical Shape and an optimized beam profile overcome the traditional spots' limits related to different grades of overlapping.

Thanks to this unique feature is now possible to increase speed, safety and effectiveness for every skin condition.

Qool-air

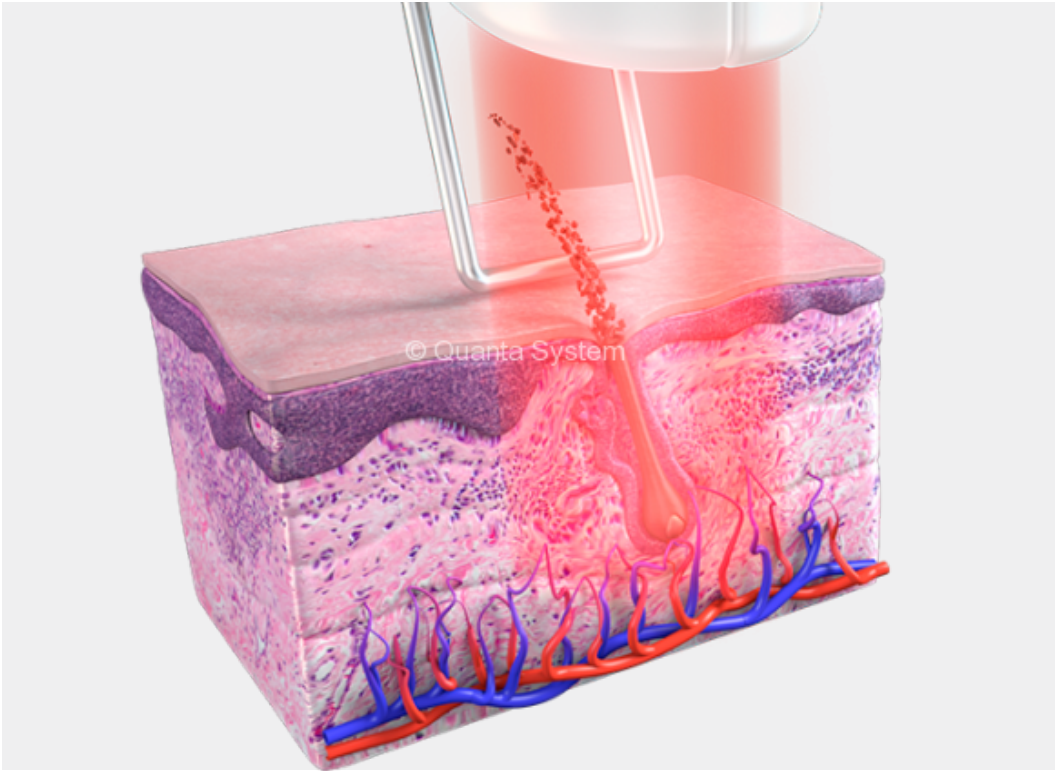

Qool-air is an exclusive skin cooling system available for the Quanta System Thunder Series.

This compact and powerful system is also able to cool-down wide areas of skin for maximum treatment comfort and is controllable directly by the laser screen. Qool-air is the ideal solution to combine skin cooling power and maximum space saving.

Applications

Some applications could have limitations related to specific skin types

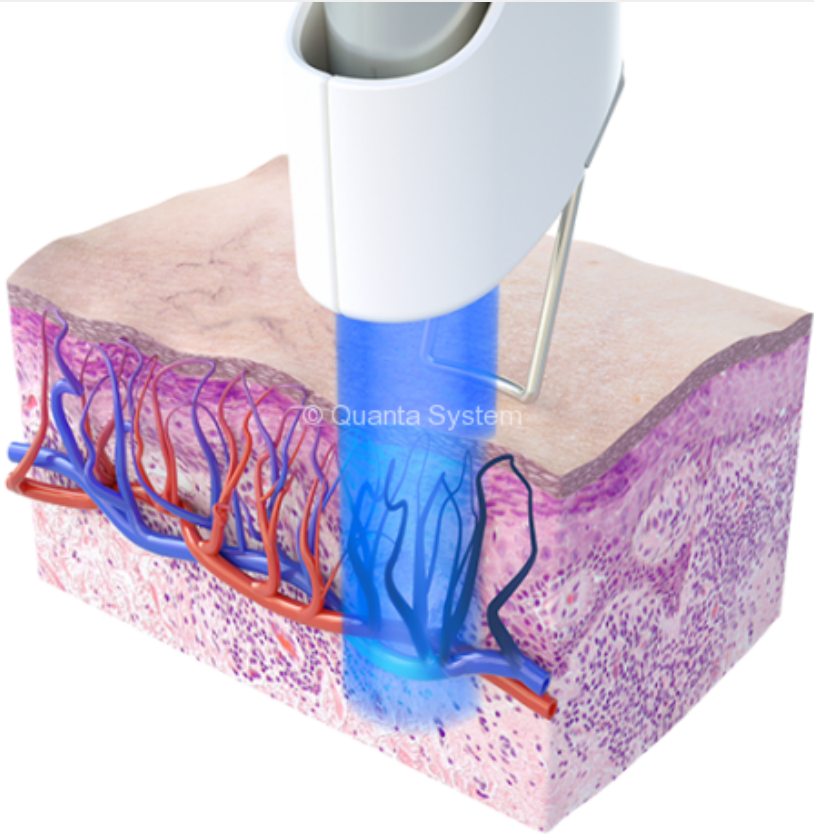

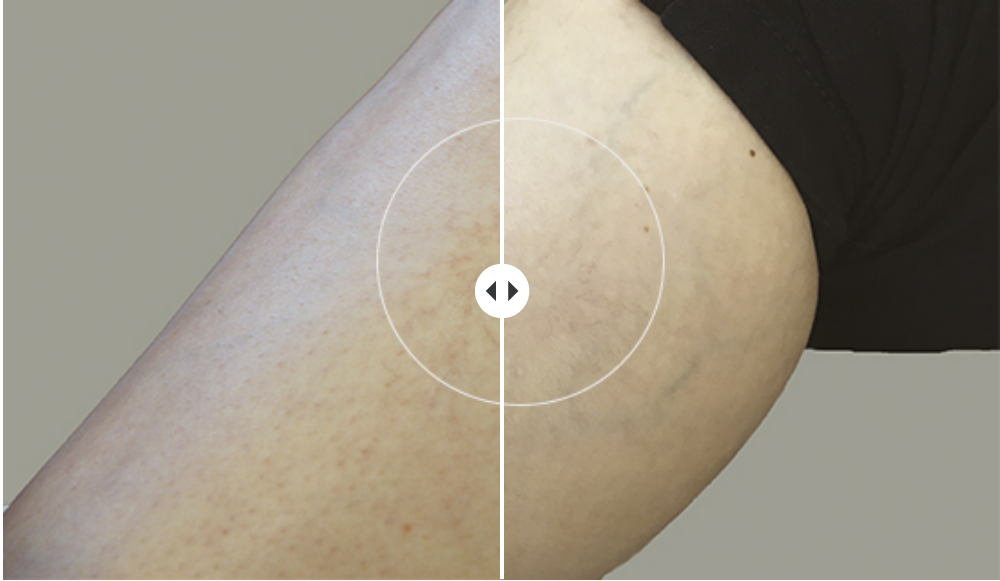

Permanent Hair Reduction
