Artiflex Borescope Video

Two-Way Articulating Flexible GenScopes are constructed with fused quartz image bundles, which make for rugged but flexible borescopes. The handle is ambidextrous and ergonomically designed for ease of use.

They are typically used in curved or tight passageways with corners; for example, in airspace or automotive applications.

Two-Way Arti-Flex GenScopes For openings 2.5mm and larger

Rugged stainless steel braided sheath protects delicate fiber-optics.

Wonderful image quality. Durable, fused fiber-optic image bundle provides crisp, clear, bright image - over 10,000 flexible glass fibers.

Easy Glide 2-way articulation for precise control in a flexible scope.

Ergonomic, ambidextrous handle. Easy to use.

Use for eye inspections or video.

New thumb-lever controls provide articulation control and an easy locking system.

2-Way Arti-Flex GenScope
