The **USAVS4-2.8-1000** has been added to USA Borescopes economy videoscope line up because it offers end users the opportunity to upgrade from a lower cost fiberscope to an articulating videoscope with its own internal lightsource, video recording, picture taking, and SD card storage. This unit features tungsten sheathing as found in many other higher end videoscope systems. The image quality provides an improvement over flexible fiberscopes which typically will feature between 9,000-15,000 pixels. This unit is a

basic system to allow for a low cost inspection option. Give one of our experienced sales persons a call to see if this unit is right for you! 931-362-3304
