UV Equipment

UV SCAN

The UV Scan is a reliable reading device that provides dose measurements. Used in combination with the tesa® UV Strip, photochromatic film, this measurements can be taken from surfaces that are difficult to access. Once exposed the strips can be evaluated with the UV Scan, which enables storage of the data.

The tesa® UV Strip is suitable for printing and coating industries. It's minimal thickness, high flexibility and self-adhesive backing enables measurements on vertical web paths and surfaces that are challenging to access. UV dose can even be detected on complex 3D surfaces. Use of the UV Scan/tesa® UV Strip minimizes waste and increases process reliability.

Appropriate for:

- Vertical web path
- Complex 3D surface geometries
- Measuring at difficult locations

Call **508 . 229 . 7774** for more information on our UV Scan.
