

Quality Ensures the Service!

Optics

193nm, 266nm, 355nm Laser Optics

Unioriental manufactures kinds of optics for 193,266,355nm lasers which are three common UV lasers. Unioriental self growing MgF₂ and CaF₂ have very good transmission for the VUV and UV wavelengths to ensure the maximum output power. Meanwhile sophisticated experience in manufacturing optics can make sure our optics quality and delivery performance stable and awesome.

Products: Lens, Windows, Mirrors, Cylindrical Lens, Prisms, Polarizers, etc.

Material: VUV MgF₂, UV CaF₂, Corning 7980 etc.

Specifications are upon customer's option.

1064nm, 532nm Laser Optics

Unioriental uses different glass materials to manufacture kinds of optics applied in 1064nm and 532nm lasers. Unioriental use the most advanced technology in fabricating and coating to meet customers requirements. Top best transmission and high damage threshold is our promise for the laser optics.

Products: Lens, Windows, Mirrors, Cylindrical Lens, Prisms, Polarizers, etc.

Material: Fused Silica, Corning 7980, N-BK7 etc.

Specifications are upon customer's option.
