We make laser welding demonstration on customers' actual parts. Not any tricky easy ones. We try and fail together and find the best parameter for their requirement. This video taken today in one of our customer's premises and was done by the customer after receiving the training.

If you are also looking for a laser welding machine contact us for details.

## Welding Thicknesses Compared To Laser Source Power

### Detail Makes The Difference

We believe, every detail counts for overall machine quality. Delivery, Installation, Operation, Function, Service.  
We do our best in every aspect for better user experience.

### Electrical Design by International Standards

We follow International Standard for Electrical Wiring Design, make sure follow up maintenance and service would be much more easier.

### Automatic Wire Feeder

Automatic Wire Feeder provides the capability for more wider range welding jobs. With adjustable wire sizes, you could easy apply laser welding for more products.

## Low Learning Curve for Operations

Easy to Move, Setup and Ready to Go. Welding with Laser is not a difficult process any more. Improve your product quality right away!
