Laser stripper machine introduction

From medical equipment to large jet aircraft, nowadays the world is full of electronic wires consist of an outer insulator and an inner layer structure. It's difficult or impossible to be treated by traditional tools .

With our deep research on laser technology and optical control, we provide an ideal solution. The laser wire stripper offers greater flexibility, not only from the perspective of the technical advantages, but also from the integrated compact desktop system automatic off the assembly line /stripping a series of solutions.

Advantages:

- › Integral overall structure, beautiful appearance, human nature operation process;
- › Patented cable fixture, high precision;
- › High electro-optical conversion efficiency;
- › The whole machine power is less than 500W;
- › The work table is movable;
- › Windows operating system is flexible and friendly interface, powerful professional software with free system upgrade, supporting PLT, BMP, DXF, TIF, SHX, CorelDraw and other format files;
- › Computer control system, professional stripping control software;
- › Long life, small size, suitable for harsh working environment.

Applications:

- › The stripping of cable insulation layer, such as mobile phones, laptops, camera, electronic dictionaries and other microelectronics industries;
- › Single wire, cable, parallel lines, multi-layer lines, etc.;
- › Suitable for AWG # 30 fine lines and very thin lines, very fine coaxial lines, etc.;
- › Enameled wire stripping of generators and starters in the automotive industry.
