Laser Wire Stripping Machine for large gauge wires

HiSupplier Escrow(<http://www.hisupplier.com/escrow/?companyId=>

Product Detail

Means of Transport: Ocean,Land,Air

Packing: woodcase

Application: Others

Brand Name: LYPE

Production Capacity: 300pcs/two month

Delivery Date: 6-8 weeks

Laser Type: CO2

Laser Wire Stripper: 1

It adopts unique technology, which allows laser beam rotates around the wires that need to process.

Product Description

Product Introduction

It adopts unique technology, which allows laser beam rotates around the wires that need to process. This machine can quickly process not only insulation but also shield layers of thick cables and coaxial wires.

On one hand, the traditional way to process thick cable realized by mechanical knife, which may cause damage to the inner layer of the wire wants to be stripped. Moreover, it belongs to "contact processing", which may cause distortion to the wire, then leads to the electric property of the wire changes. Furthermore, the knife itself is consumable. On the other hand, the traditional laser wire stripping adopts the way that wires move on a level, while laser beam keeps immobile, moreover, it requires that the wires need to be processed must not be too thick. However, the rotary laser(<http://www.hisupplier.com/a-rotary-laser/>) wire stripping machine overcomes the above two defects. It includes the advantages of the above two processing ways, belongs to "non-contact" processing, without any damage to the inner wire. More importantly, it can process thick wires, which satisfies the becoming higher and higher demands on the electric property of cables in various industries.

Product Features

It adopts "non-contact" processing, without damage to the inner wire, and the electric property of the wire keeps unchanged.

It is suitable to wires with diameter of 1-15mm.

With flexible processing way, it can realize circle stripping and window opening.

High efficiency, it can complete wires processing in several seconds.

It suits irregular section wires processing. The short laser(<http://www.hisupplier.com/a-laser/>) beam focus ensures not only never cause damage to the inner layer, but also covers the processing area which needed.

Applications:

It applies for cutting the insulator and shield layers of thick wires and coaxial wires, which is suitable to connectors, navigator, communication, medical, as well as electronics industries. It can satisfy the needs of processing thick wire with diameter of 1-15mm.
