

LWI 4.0 – industrial laser welder

The LWI 4.0 series is a laser welding machine for mold repair, welding of large parts and any other micro welding process, where the versatility of the welding machine is required. It has become a reference equipment in the industrial sector: simple to use, very powerful and easy to move to reach even the most difficult areas to weld or repair. Its main features are:

- Simple user interface via 7" touchscreen display
- 3 axes with electric drives
- Emergency button
- USB for firmware updates and real-time diagnosis of features
- Water level control
- Drain plug

Optional:

- Fourth motorized circular axis

MOTORIZED ARM

The motorized arm allows you to move the laser head in a precise and fast way to reach even the most difficult points.

The X/Y/Z axes are controlled by joysticks and rockers, for greater freedom of movement.
