MAVERICKCNC MV-PRO PLASMA TABLES

GET A QUOTE

You don't call yourself Maverick if you don't walk the walk. In our case, that means creating the MV-Pro cutting tables designed to meet the demands of clients in need of powerful CNC systems that optimize cut quality. The fact that they're automated, turnkey plasma tables supported by a company with a 17-year history of building cnc cutting solutions that withstand the rigors explains why our tables are the best on the market. Throw in the radical idea of complimentary three-day onsite training and you'll see why we proudly call ourselves Maverick.

When it's time to step up to the table that steps up to the task time and again, it's time to go Pro. Engineered for reliability and ease of operation, the MV-PRO plasma tables are fully integrated with real-time software and choice of Hypertherm plasma cutter or Thermal Dynamics is simply top-of-the line.

Its rugged, unitized frame and fully machined gantry stand up to the pressures of a heavy workload while still offering you precise motion. The operator control station is loaded with optional configurations. Acceleration of this robust cutter is quick and consistent. For shops with higher production values and that frequently process heavy plates, the MV-PRO plasma tables perform day in and day out with a record of reliability that is unsurpassed. In short, designed using industrial quality components that are durable and require less maintenance, the MV-PRO is the budget friendly workhorse for those companies with high volume cutting needs.
