MODULATOR BIAS CONTROLLER - TUNABLE

PRELIMINARY

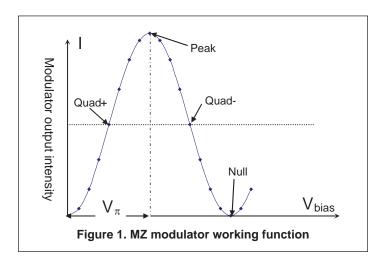

Features

- All settings are remotely controllable through USB computer interface
- · Tunable locking to any desired working point
- Two operation modes: calibration mode and locking mode
- · Tunable/fixed selectable
- Auto/manual modes selectable
- The pilot one can be stopped
- Calibration off mode for quick system setup in locking mode
- Low profile (2.53" x 2.57" x 0.65")
- Access for external photo-detector
- · User adjustable pilot tone amplitude
- PD integrated.
- GUI computer interface
- All the parameters can be read and displayed at GUI

Product Description

The Modulator Bias Controller is a full-function miniature OEM version of the Modulator Bias Controller (MBC) family. It is designed to be used in analog systems and/or applications. The Modulator Bias Controller can be used to lock the working point of the modulator at any working point of the modulator working function. The locking modes and slopes are selectable under software control via the GUI. An optional pigtailed photo-detector is available. An external photo-detector may also be used.

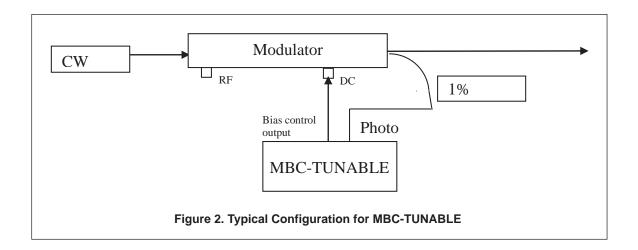

Specifications

Parameters	Min.	Тур.	Max.	
Optical Performance				
Detector Input Power ¹ (dBm)	-30		-10	
Optical Wavelength (nm)	1000–1650			
Electrical Performance				
Bias Voltage (V)	-12		12	
Null Mode Extinction Ratio ² (dB)		36	40	
Locking Slope	Positive or Negative			
Locking Mode ³	Quad+ (Quad-) or Null (Peak)			
Pilot Tone				
Amplitude (mV)	20-250			
Pilot Tone Frequency (kHz)		5/10		
Power Supplies				
DC Positive Power Voltage (V)	14.5	15	15.5	

Parameters	Min.	Тур.	Max.	
DC Negative Power Voltage (V)	-15.5	-15	-14.5	
DC Positive Power Current (mA)		145		
DC Negative Power Current (mA)		80		
General	al			
Operating Temperature (°C)	0-50			
Storage Temperature (°C)	-40-85			
Dimension (inch)	2.53 x 2.57 x 0.65			
Weight (lb)	0.2			

- ¹ For a given input, detection power refers to the coupled optical power to the photodiode of MBC when the modulator output is at its minimum attenuation (The detection power does not describe the detected power at locking status).
- $^2\,$ In this case, the modulator output power was greater than 0 dBm. 1% coupler was used. The extinction ratio will be close to but not exceed the extinction ratio of the modulator.
- ³ The desired locking point can be tuned away from Peak/Null/Quad. This tune mode can be switched off/on.
