# YS-D/H Series Switching Tabletop Fiber Laser Cutting Machine

Category

光纤激光切割机

(/product/guang-xian-ji-guang-qie-ge-ji-52)

机型特点:

Excellent beam quality, smaller focused spot, higher working efficiency and better processing quality. Very high cutting speed, 2~3 times of CO2 laser cutting machine with the same power. Independent design independent control cabinet CNC machine, machine bed adopts high strength overall welded body. ♦After high temperature second annealing heat treatment process, it has good rigidity and stability. The crossbeam adopts patented cast aluminum crossbeam, which has the advantages of high strength, light weight and good rigidity. ♦Imported high-speed rack and pinion drive operation, high precision and fast speed. ♦Mainly for the fast and precise cutting of the metal plate under 50mm.

Laser cutting machines:

Flat Laser Cutting Machines,High Power Laser Cutting Machine,Double platform laser cutting machine

## • Laser head for fiber optics

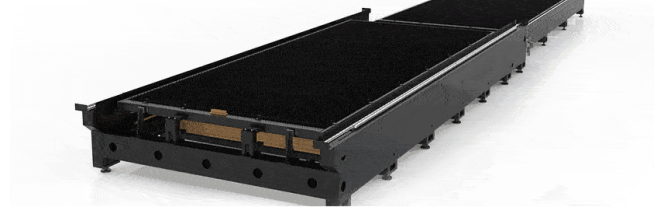

The ProCutter cutting head has an autofocus system for fast focus. Lightweight and slim design ensures fast acceleration performance and cutting speed. Accurate and fast pitch measurement without drift even at very high acceleration. Flexible focal length adjustment according to the thickness of the sheet makes it fast and easy to process different thicknesses of sheets.

## • Switching double workbench

This equipment consists of fixed working table and two movable cutting tables. The two cutting tables are automatically exchanged through hydraulic lifting device and chain transmission device, and the whole exchange process can be completed within 30s, which greatly improves the production efficiency. It has good strength and stability.

INNOVATION (/Innovation.html)

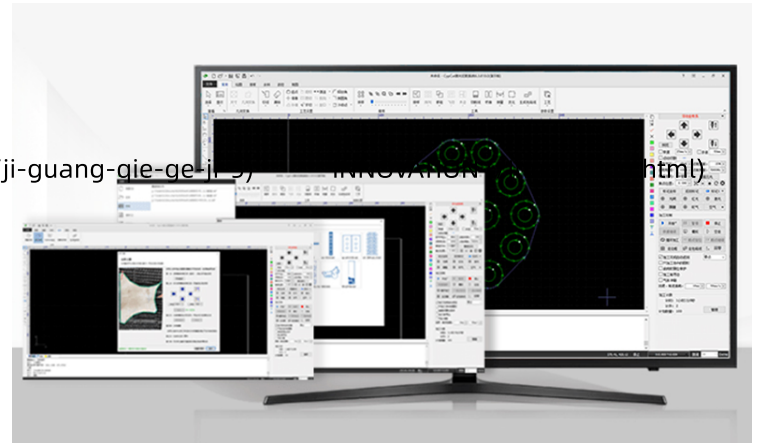

## • Aircraft aluminum crossbeam

The aerospace aluminum is manufactured using aerospace standards and refined after artificial aging and solution treatment, so that the hardness of the beam can reach T6, while having characteristics such as corrosion resistance, oxidation resistance, toughness and good ductility. The light weight facilitates high speed movement during processing, and also has the feature of high flexibility, which can greatly increase the processing speed while meeting the precision.

## • Intelligent Operating System

Professional intelligent control system with automatic nesting function stable performance, fast operation, support for a variety of common file formats, DXF, PLT simple and fast operating system, a key to import multiple types of cutting graphics, accurate cutting instructions, so that the user experience more excellent results.

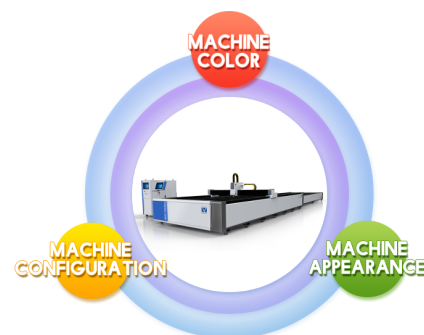

## • High Performance Lasers

Adopt domestic famous brand high performance fiber laser. Committed to providing global laser field high-performance, high-quality, cost-effective fiber laser and device integration solutions and professional, perfect service experience. Our products have been widely used in aerospace, 3D printing, automotive, petroleum, electronics, communications, photovoltaic, medical and other industries.

## • Customized Services

Customize exclusive body color, configuration, appearance, etc. according to different needs of customers. Mass production and fast delivery.

- Material Applications

Cutting stainless steel, carbon steel, alloy steel, spring steel, copper plate, aluminum plate, gold, silver and other metal plates.
- Processing method

Plate cutting.
- Model Features

• Automatic obstacle avoidance

• Common Edge Cutting

• Extremely fast piercing

• De-slagging process

• Intelligent Collision Avoidance

• High precision operation
